

*Did you know that how we handle mice can impact their anxiety & stress?*

Research shows that these small but critical research heroes prefer to be handled using a **scooped hand method**.

This gentle and effective approach improves animal welfare and provides more reliable and reproducible results, reducing the number of mice needed for essential animal research.

# Get the Scoop

## Tips & Tricks of Rodent Handling

### Tip 1:

A flat or scooped hand to remove mice from their cage has shown to decrease stress.

### Tip 2:

Allowing the mouse to move freely from hand to hand without restraint helps the animal stay calm.

### Tip 3:

Smooth, slow and gentle movements improve the overall handling experience for the animal and for the human handler.
