

RATS & MICE

98% of human genes have a comparable gene in the mouse.

Research Areas

Aging research
Cancer research
Cell communications
Fertility
Genetic diseases
Immunotherapy
Vaccine development

Nobel Prize Winning Breakthroughs

Discovery of penicillin
Development of yellow fever & polio vaccines
Discoveries concerning cholesterol regulation
Discovery of key immune system functions
Development of in vitro fertilization
Discoveries concerning the body's immune system
Immunotherapy to fight cancer
Development of treatments for malaria & roundworm parasites
Discovery of HIV
